

BRUCE DE PALMA & THE N-MACHINE

By Matthew Eaton.

Imagine having a car you never need to refuel. And a house in which of your power costs nothing.

You could travel infinite distances, you could have all that extra money to spend elsewhere in your life. It's a big bold step towards individual self sufficiency.

According to an American scientist, we can have all the pollution-free power we need without the need for wind, solar and hydro-generators and their relative quirks.

Californian free energy scientist Bruce De Palma, currently on holiday in Byron Bay in northern NSW, says there is an infinite well of power we can use. He has invented an electrical generator he calls the "N-Machine" (ie with possibilities to the Nth degree).

This machine combines the induction of electricity through a magnetic field with the unexplained axial principle of a

gyroscope. The generator puts out more power than is required to run it, becoming self-perpetuating and thereafter a free source of energy.

Impossible, according to Maxwell's equations on magnetism and Newton's laws of physics. De Palma simply says, "The laws are wrong".

His work is based on the experimental notes of the scientist Michael Faraday, which date back to 1831. De Palma says the most important of Faraday's findings were never expanded upon because conventional science could not explain them.

Too good to be true? He says the biggest problem people have with believing him is with the idea that it's possible to get something for nothing. It's against our protestant work ethic - no such thing as a free lunch, let alone a free source of energy.

Most people have heard stories of great inventions which were supposedly bought off and then buried by large companies because they were too good, too much of a threat. This is the most threatening of all, says De Palma. He claims his work has been declared "Top Secret" in the United States. He says the government is using it as a propulsion system in warships. De Palma is spreading the word on the N-Machine so his ideas can't be hidden from the world. He wants to move to Australia for good.

It might sound like paranoid delusion but he speaks calmly, confidently and in precise detail about his work.

"There is no

answer in a world running on energy conservation. The only end is the consumption of all energy and it's the heat death of the universe ... everything goes black, the lights go out and everything.

"I would not submit to such a vision and, furthermore, I knew the physics that lead you to such a vision had to be wrong. I'm in Australia because I feel here, there is not this superstructure of a military-industrial complex."

Shouldn't industry pick up such an idea and run with it?

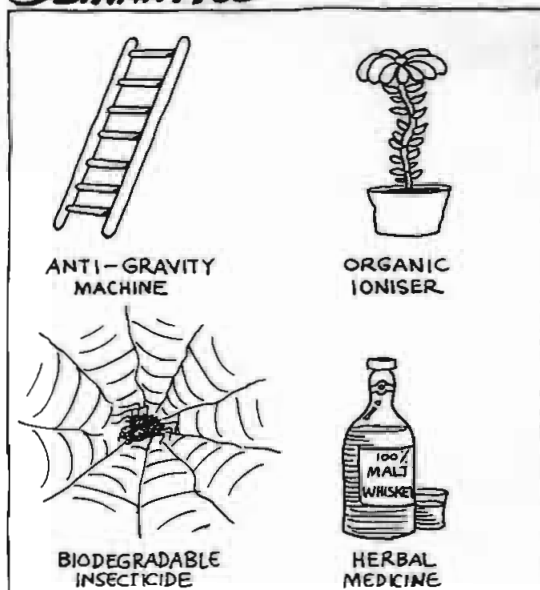

"If it was ever rumoured that there was an alternative source of energy people would pull their money out of all of the atomic utilities and they would never be able to pay the debts off that they would have incurred. Then the oil people and the uranium people would no longer have a market for their product. But this would take place very slowly.

"Look at what people will do just to control the oil prices - the Gulf War. You know, America is not totally dependent on middle east oil, but Europe is, and so is India, and so is Japan - and by controlling that region of the world we have our hands around the throats of all the rest of these countries. This is the way the power politics of the world operates.

"A thing like the N Machine, which empowers the individual and pulls the plug out from all this power stuff, is a bitter pill for these guys to swallow."

An Indian scientist named Paramahansa Tewari is an important lynch-pin in De Palma's work. De Palma sent him his findings on the N-Machine and Tewari has commenced an Indian government funded research project in the laboratories of the Indian Power Board to develop a 30kW power plant for remote villages. In letters of correspondence with De Palma, Tewari says he is getting around six times more power out of his generator than it takes to run it.

SEMANTICS

episodes of 'missing time' by hypnotic regression that conscious memory of an abduction floods back.

One remarkable factor that has emerged via hypnosis, is that individual descriptions on the appearance of the extraterrestrials, as well as the interior of their ships correspond, - in fact, more often than not, personal accounts are identical, from general descriptions down to fine detail.

The extraterrestrial beings are generally described as three to five feet in height, large heads in proportion to a thin body. Their eyes are large and upturned, without visible pupils, their noses are small, they are completely hairless and have a greyish-white skin - the reason why they are often labelled "GREYS".

The 'abductees', male and female, are brought on to the ships, where they usually undergo a series of tests and exami-

nations. Following that experience, human females frequently find themselves pregnant. After approximately three months, the hybrid foetus is removed, following another examination. When memories of the events return, psychic trauma frequently develops as a result of the vivid recollection of having had to face intense FEAR, - and having been subjected to procedures over which they seemingly had no control.

Memory loss and the "missing time" phenomena are mechanisms of our unconscious to protect the conscious mind from remembering traumatic events.

However, repressed and submerged fears continue to control our conscious behaviour. We now understand that we interpret our reality from within our own house of trick mirrors, based upon all of our experiences, - conscious and uncon-

scious, good and bad.

And as such, abductions are an INTERNAL PHENOMENON created by our 'mirrors', as much as a physical experience.

Let us examine a theoretical exercise, let us shift paradigms and choose to see the 'intruders' as visitors, visitors who come by our invitation.

Bashar, an extraterrestrial from Essassani, expresses this point of view:

"... We choose to call abductions 'temporary detainments'. Let us also remind you that these interactions between your species and the alien species we have referred to as

the Zeta Reticuli (the Greys) are all done through absolute agreement, even though on your part many of these agreements may be done unconsciously. And they are only brought to the surface reluctantly through the idea of the release of your fear.

But you are serving each other ... you are beginning now to realise that your species operates on a very highly individualistic level, that their species operates on a very highly developed mass consciousness level. And that to each other you are extremely alien.

Just as much difficulty as you have understanding, ... they have difficulty understanding what it is to operate as a single individual cut off from the whole. And although they do not express it in exactly the same way, in many ways they have just as much fear and uncertainty about you as you do about them."

Bashar, is channelled by Darryl Anka and will be coming to Australia and New Zealand in September this year. See details on the inside back cover of this issue of Nexus.

NEW ELECTRO-PHYSICAL THERAPY DOWN UNDER

Electro-physical measurements have been used in the field of medicine for more than a hundred years, as a method of measuring the condition of the heart (E.C.G.). Forty one years ago, with the advent of new technology, it became possible to apply the same principles to the diagnosis of other body organs and functions.

This method, known as Electro-Acupuncture, was scientifically developed and clinically tested by a group of three hundred German medical Doctors and specialists. With this method, it is possible to electronically look inside the body and determine the actual state of organ function, in a very similar manner to that which is used by radar to map the contours of the sea bed or to determine changing weather patterns.

Further advances included the development of the method known as compatibility medicine testing. With this method, it

is possible to electronically determine the effect of a medicine by testing the medicine in circuit with the patient. Using this specialised medicine test, it is possible to determine which medicines are compatible with the patient and to determine which medicine will not produce harmful side effects.

The use of compatible medicine testing, takes the guess work out of prescribing and leads to the use of only those medicines which are beneficial for the patient and the patient's condition.

The MORA Therapy Instrument was developed by a German Doctor of Medicine - Dr. Franz Morell over twenty years ago. Today this instrument is used in twenty two countries around the world and is registered in Germany as a medical instrument for use in medical clinics, hospitals and health clinics.

For those interested, a weekend seminar on this subject will be held on October 31st, November 1st, November 2nd. For more information contact Philip Higson after 6pm on 07 352 6530.

MAD SCIENTISTS TO GATHER AT KRYAL CASTLE

Unfortunately, the same weekend as the MORA Seminar (see above) will see a unique gathering of people and gadgets, at a equally unique location.

Kryal Castle near Ballarat in Victoria will play host to a three day event including lectures, demonstrations, stalls videos

and more.

Nexus will be there too. For more details see the advert on page 66.

NEWMAN'S GYROSCOPIC THEORY

The theoretical basis of Joe Newman's Revolutionary Energy Machine challenges many accepted laws of physics.

The starting point for understanding Newman's ideas is his assertion that the fundamental building block of all matter is the gyroscopic particle, an infinitesimal unit of matter that spins like a gyroscope.

Newman claims that the mechanics of magnetism and electricity, which have never been fully explained, can be described in terms of how gyroscopic particles react and interact.

Newman's theories also depend heavily on the idea that all matter is concentrated energy, which can be released if one has the mechanism for unlocking it.

Theoretically, Newman's machine could run indefinitely, but - according to him - not because it is CREATING energy to run itself, but because it is converting matter to energy.

In radically oversimplified terms, this is what happens when Joe Newman throws the switch on the Revolutionary Energy Machine:

1) An electrical current is sent through a long (miles long) coil of copper wire, magnetising it and creating a strong mag-

netic field.

2) Newman describes the mechanics of this field as "shells of force" composed of gyroscopic particles that move in a spiral pattern around the wire. Originally IN the wire, the particles expand outward and thus create the magnetic field.

3) When the particles form a magnetic field, Newman says, they are travelling at the speed of light in two directions - in the spiral pattern around the wire, and in their own normal gyroscopic spin. This gives him the right side of the $E=MC^2$ equation; the particles (mass) multiplied by the speed of light squared.

4) The machine operates in pulses; ie the electrical current is continually turned on and off. This causes the magnetic field - ie the gyroscopic particles - to expand and collapse.

5) When the trillions of gyroscopic particles that have been released collapse back into the wire, some of them collide with other gyroscopic particles. Because of the nature of the gyroscopic spin, the collisions cause the loose particles to bounce off at right angles; those particles emerge at one end of the wire as electrical energy.
